SOLUTIONS START HERE SEVERN TRENT

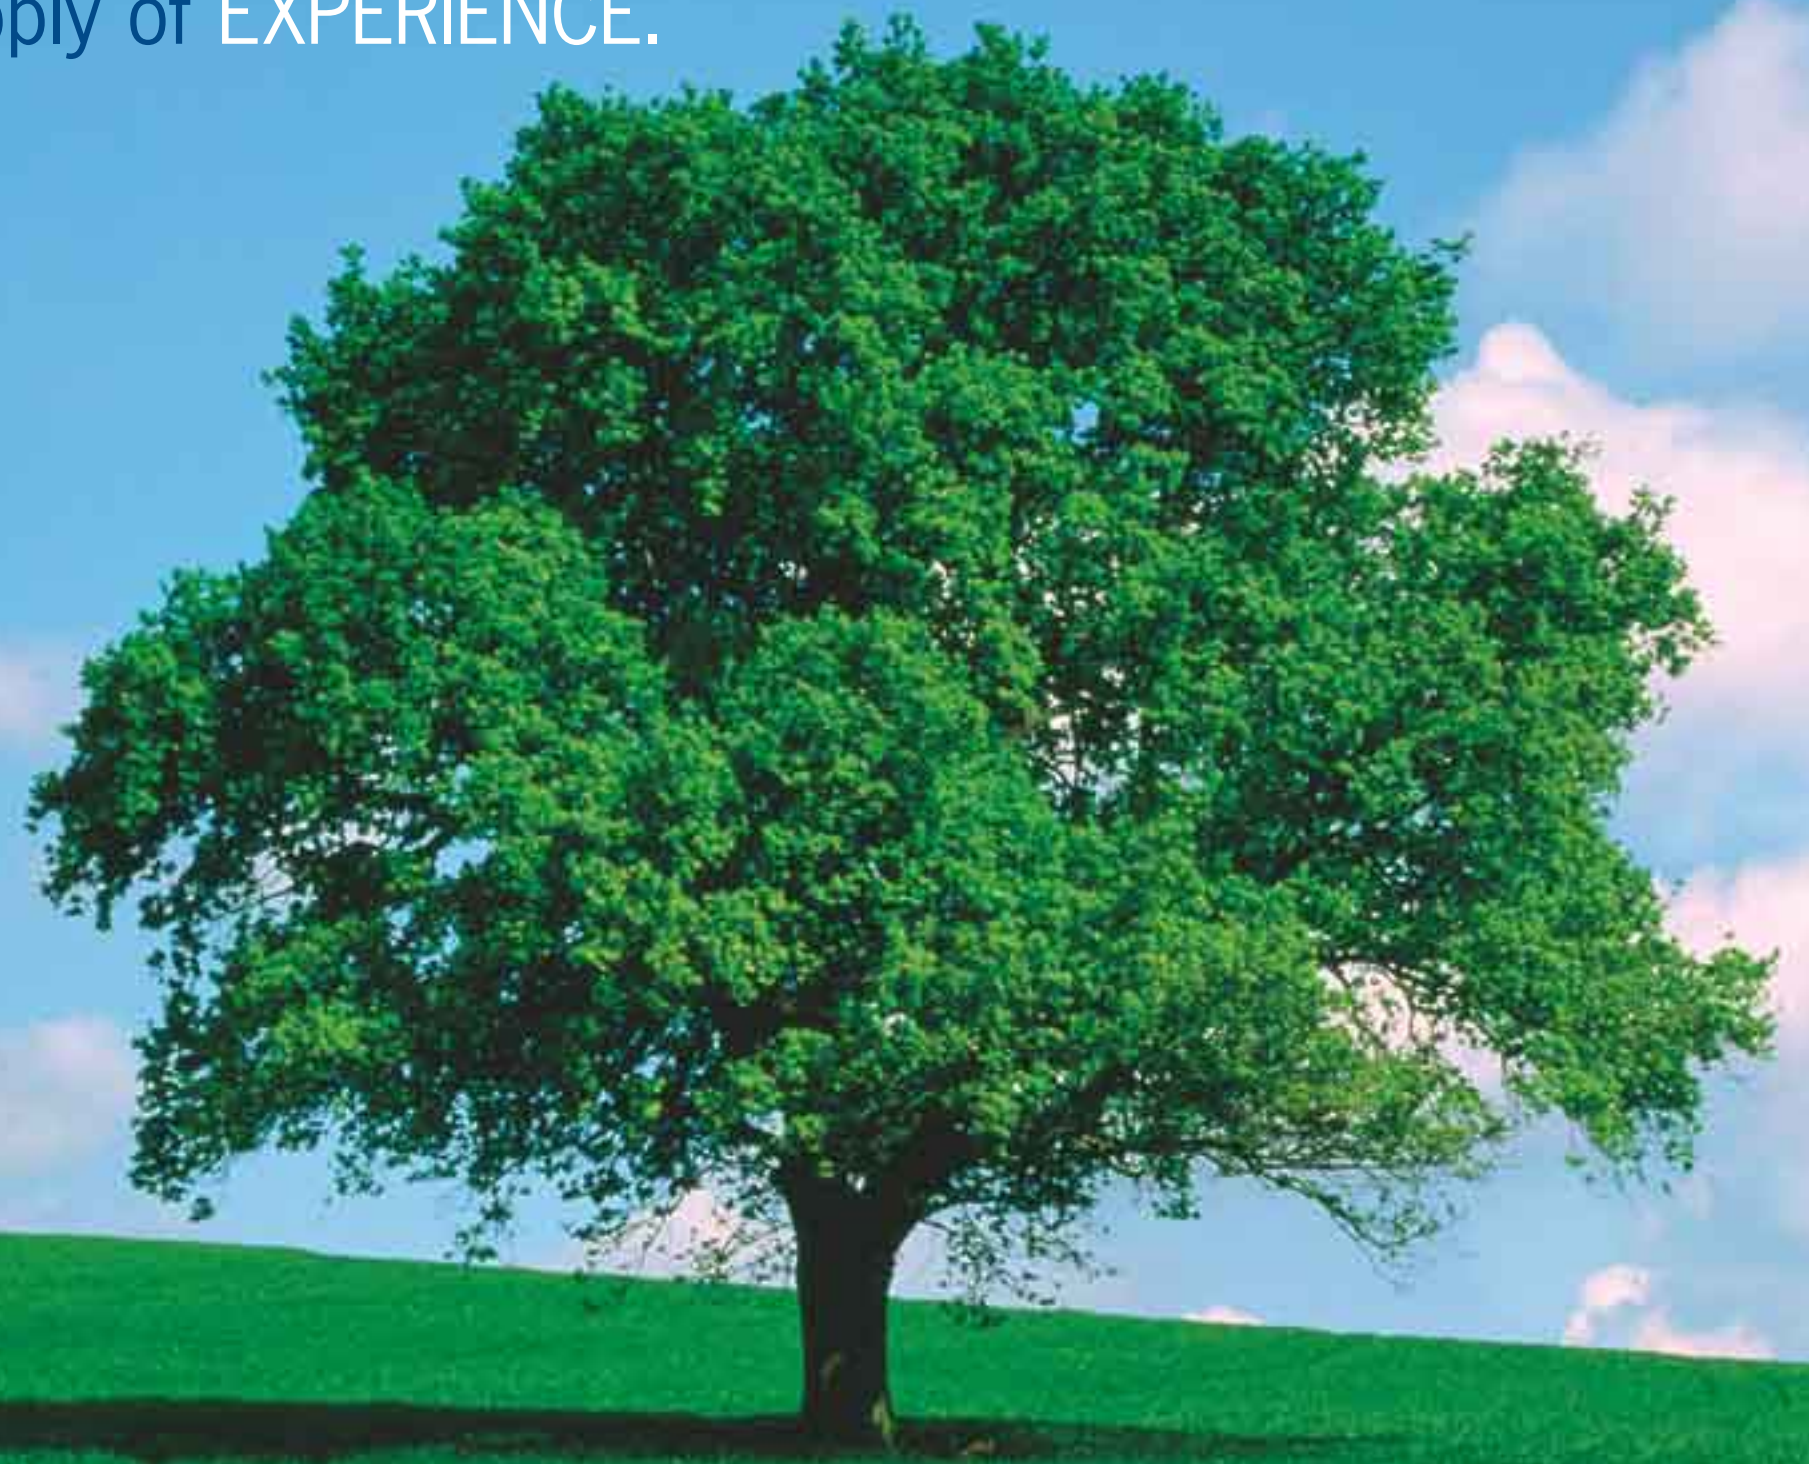

Our water treatment solutions come with an unlimited supply of EXPERIENCE.

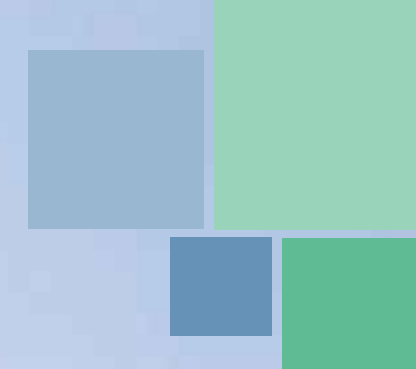

Technologies that make sure water is free of contamination. Pipelines that serve homes, businesses and industries. Equipment that processes water and wastewater on ships at sea. Desalination and reuse technologies that bring potable water to the desert. Environmentally conscientious watershed management. And the people, processes and advanced technologies that ensure municipal and industrial water is always safe and available.

If it has to do with our most precious natural resource, it's the business of Severn Trent Services. Since the 1980s, we've been one of the nation's leading providers of innovative water and wastewater treatment solutions to municipalities, business and industry, the military and individuals.

More than 600 industrial, private and municipal facilities nationwide rely on our expertise to protect their investment, maximize system efficiencies and operate cost-effectively and in full regulatory compliance.

In communities around the world we own and operate facilities that serve the homes, businesses, and towns of our employees and neighbors—making for a record of good citizenship. Our customers benefit from a global research initiative and the operational best practices of decades of customer installations worldwide—all backed by a commitment to high quality service and continuous technological improvement.

A continuous flow of **INNOVATION** is the source of **COST-EFFECTIVE** solutions.

Severn Trent Services focuses on developing technologies that improve efficiency, maximize uptime and reduce costs. Like our line tapping and line stopping solution that cuts pipeline repair time in half, helps safeguard against system contamination and eliminates downtime.

Our award-winning water purification technologies cost-efficiently address fresh water, brackish water, seawater and wastewater application needs. Reliable disinfection and filtration solutions include chlorination, ultrapurification, arsenic removal, desalination, wastewater evaporation, biological treatment systems and more. Alternative and on-site systems reduce the risks and hazards associated with handling and storing chlorine gas.

We're structured to deliver large-company expertise with small-company attention to detail. Industrial customers count on us for comprehensive asset management, rigorous quality assurance and innovative ways to manage their supply chain and reduce waste. From niche services like meter reading and consulting on investment strategies to stormwater management systems and comprehensive facility management, our focus is always on continuously improving efficiency without compromising safety.

Severn Trent Services' pipeline customers benefit from decades of experience with more than 50,000 miles of water and sewer pipelines. Our field engineers have unparalleled expertise in solving tough problems in water distribution, sewer collection systems analysis, pipeline repair and rehabilitation.

A safe water supply begins with SAFE OPERATIONS.

We're aggressive about safety and proud of it. Safety is an integral part of responsible management and Severn Trent Services has won more than 30 major safety awards in the past 15 years alone. Our employees are continuously trained in rigorous safety protocols and regulatory compliance. They know that safety is always Job No. 1.

We manufacture a complete line of high quality instruments that measure and control the critical parameters that affect water and wastewater treatment. From gas leak detectors to quality assessment systems that can rapidly detect intentional or accidental water contamination, Severn Trent Services has the technological expertise our customers need to maximize safe operations.

The value we put on safety also means we care for the environment. We don't cut corners. Worldwide, our solutions are designed to comply with safety and process regulations wherever they are employed.

Safe operations are also the most economical operations, because they minimize unexpected downtime and its associated costs and reduce potential liability for our customers.

Innovative water and wastewater treatment solutions. Experienced, reliable service. Cost-effective options. The highest safety standards. If those are your priorities, your solution should start with [Severn Trent Services](#).
